

CASESTUDY #2315

Select Fluid Power needed to relocate an entire 40,000 square foot facility. With over 35 specialty machines ranging from 3000 to 48,000 pounds, ACL Industrial Movers were called in to plan, transport and relocate the facility.

SELECT FLUID Plant Relocation

Heavy machinery transportation and relocation requires an industrial moving crew well versed in planning and execution. The planning for this type of move is dependant on the type of machinery to be moved. The more precise the equipment, the more delicate and thought out the move needs to be. In this situation, ACL Industrial Movers were required to relocate one of a kind, intricate precision machines.

THE CUSTOMER | Select Fluid Power

Select Fluid Power is a metal finishing, hydraulic parts company. Focusing on customer service and industry expertise, Select Power provides hard chrome plating, hydraulic repair, machining, grinding and polishing services throughout the lower mainland. Owning custom machines like their 50' chrome plating tank to many various machining tools, they offer their customers a myriad of solutions to their hydraulic needs. For each service Select Fluid Power offers, they own and operate a highly specialized precision machine to complete the work. These 35 specialty machines needed to be relocated.

Moving 35 machines from one 40,000 square foot shop in Vancouver to a new 40,000 square foot shop in Langley required significant planning and organization. Each machine, although industrial in application, needed to be moved delicately to avoid damage.

Now located in Langley BC, Select Fluid Power's new facility is set up to service mining, construction, forestry, oil & gas, manufacturing and marine & port customers.

THE CHALLENGE | Relocate 35 Machine

ACL Crane & Industrial Movers were required to move the machines from Vancouver to Langley. When moving large specialized equipment, it is paramount to have the right planning and experience to avoid potentially damaging the machines in transport. This was the case for this facility relocation.

35 pieces of specialty equipment that weigh from 3,000 to 48,000 lbs and requires 40,000 square feet for adequate set up, is a daunting task. Safety for the public and crew as well as the machines needed to be considered.

THE SOLUTION | PLANNING & EXECUTION

Moving any machines, let alone specialty hydraulic equipment requires intricate planning and execution. To keep a project like this on budget, it requires a team of industrial movers with the right experience. Experience helps a team prevent damage or issues from arising since they have already moved specialty machines in similar situations.

ACL Industrial Movers, with their 18 years of industrial moving experience, were called in to complete the task. ACL developed a airtight logistics plan to relocate the facility.

THE RESULTS

ACL Crane & Rigging | Industrial Movers were able to disassemble, package, load, transport, unload and place all 35 units with 0 damage.

Considering the scope of the project, 0 damage was the goal and for ACL Industrial Movers, it is the standard. To execute a project like this, the planning and execution had to be flawless. ACL Industrial Movers did just that, they followed a strict transportation and relocation plan to safely and efficiently relocate the plant.

CUSTOMER TESTIMONIAL

“

WE WERE CONCERNED ABOUT THE SAFETY OF OUR MACHINES. THEY ARE THE BACKBONE OF OUR OPERATION AND MANY OF THE MACHINES REQUIRE SPECIAL HANDLING TO PREVENT DAMAGE.

IN REVIEWING ACL'S DETAILED RELOCATION PLAN, WE REALIZED THAT WE WERE IN GOOD HANDS. DEFINITELY RECOMMEND CHAD AND HIS TEAM FOR ANY INDUSTRIAL MOVES.
